**Insert.**

**Rotate.**

**Remove.**

**The simple and  
safe way to  
test for HPV.**

**Self-collected  
cervical screening  
tests (CST) are  
now available for  
eligible people  
with a cervix.**

## **Self-collected cervical screening tests (CST) are now available for eligible people with a cervix.**

- The test looks for the presence of Human Papillomavirus (HPV), which can cause changes to the cells of the cervix if left undiagnosed and untreated.
- It's simple, pain-free, and as accurate at detecting HPV as clinician-collected tests.
- It's as easy as insert, rotate, and remove.

### **Online bookings for Telehealth are now available for self-collected CST.**

- After your telehealth consultation your swab will be mailed to you.
- Collect the test and return the sample in the replied paid envelope.
